

PostgreSQL installimine

- [Allalaadimine](#)
- [Paigaldamine](#)
- [PostgreSQL käivitumine](#)
- [Kontrolli PostgreSQL-i pgAdminiga](#)

Allalaadimine

Ava PostgreSQL allalaadimise leht: [PostgreSQL: Downloads](#)

⚠ Laadi alla **uusim PostgreSQL versioon**.

Kui uusima versiooniga tekib probleeme, võid hiljem proovida mõnda varasemat versiooni.

- Vali oma arvuti operatsioonisüsteemile sobiv PostgreSQL paigalduspakett.

Downloads

PostgreSQL Downloads

PostgreSQL is available for download as ready-to-use packages or installers for various platforms, as well as a source code archive if you want to build it yourself.

Packages and Installers

Select your operating system family:

Linux

macOS

Windows

BSD

Solaris

- Kui kasutad Windowsit, vali **Windows** ning jätkka allalaadimisega vastavalt lehel kuvatavatele juhistele.

Windows installers

Interactive installer by EDB

[Download the installer](#)
certified by EDB for all supported PostgreSQL versions.

Note! This installer is hosted by EDB and not on the PostgreSQL community server.

This installer includes the PostgreSQL server, pgAdmin; a graphical tool for managing integration, migration, replication, geospatial, connectors and other tools.

This installer can run in graphical or silent install modes.

The installer is designed to be a straightforward, fast way to get up and running.

Advanced users can also download a [zip archive](#) of the binaries, without the installer.

Paigaldamine

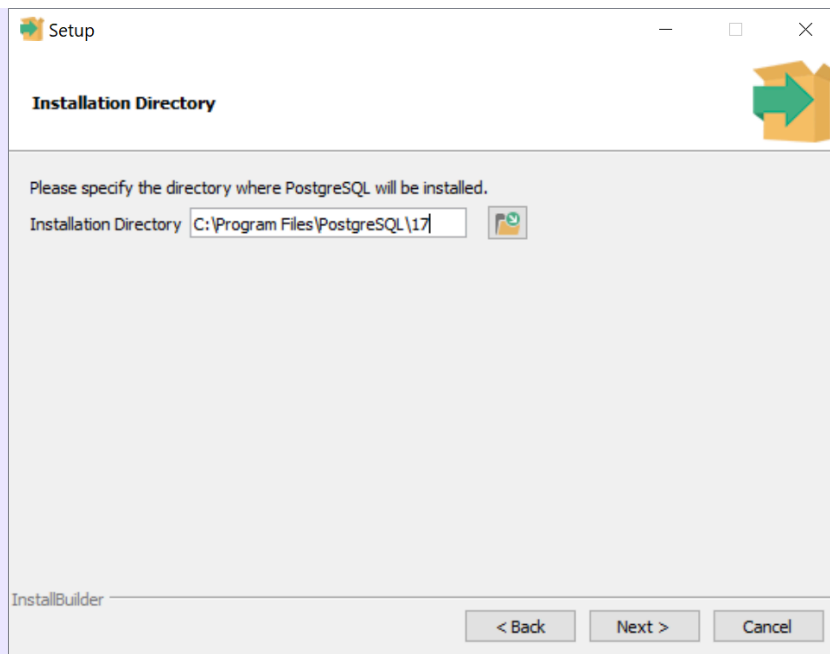

- Kui paigaldusfail on alla laaditud, käivita see.

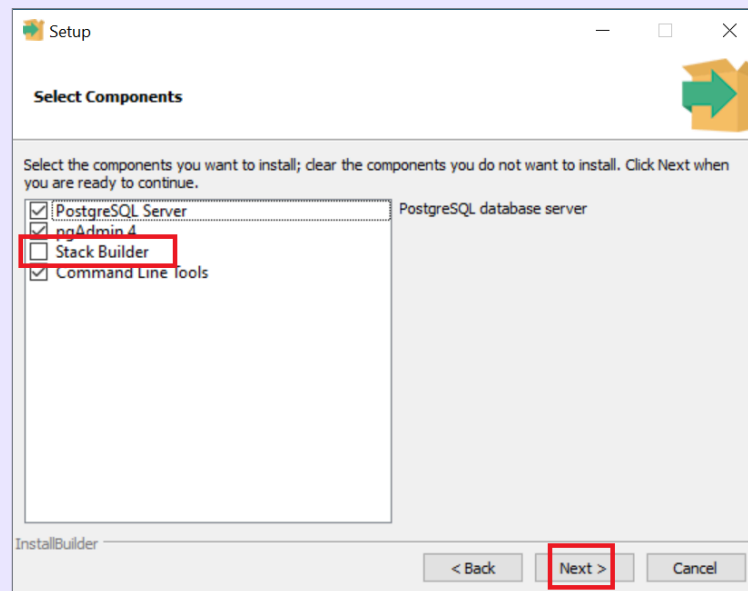

- → Next

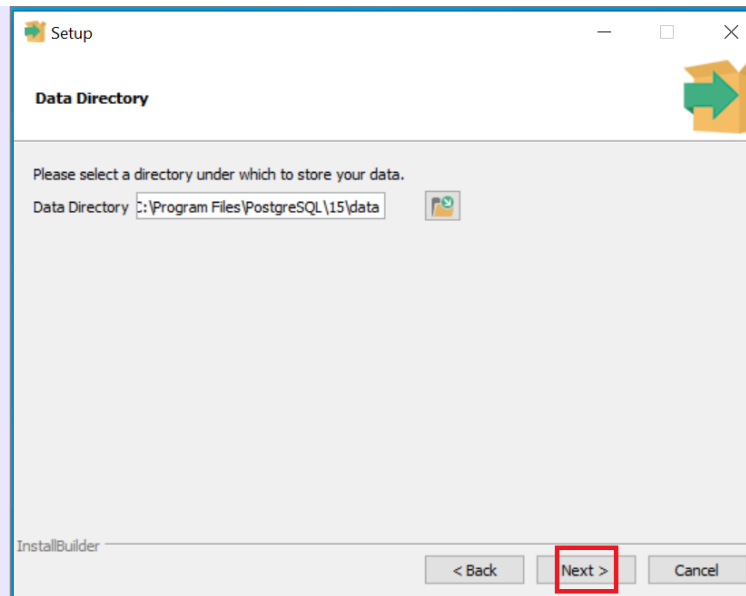

- Installer küsib, kuhu PostgreSQL paigaldada.
- Vaikimisi pakutud asukoht sobib tavaliselt hästi
- → Next

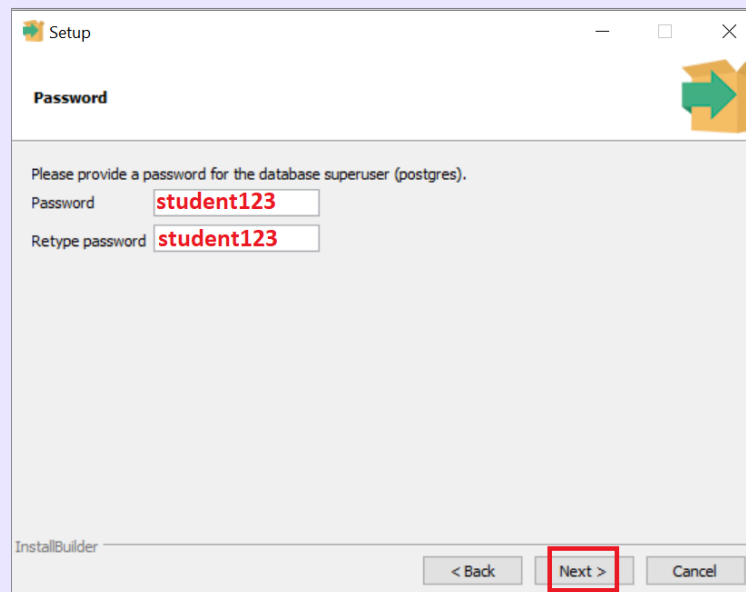

- Vali paigaldatavad komponendid
- Installer kuvab nimekirja paigaldatavatest komponentidest.
 - Soovi korral võid eemaldada valiku:
 - Stack Builder
- → Next

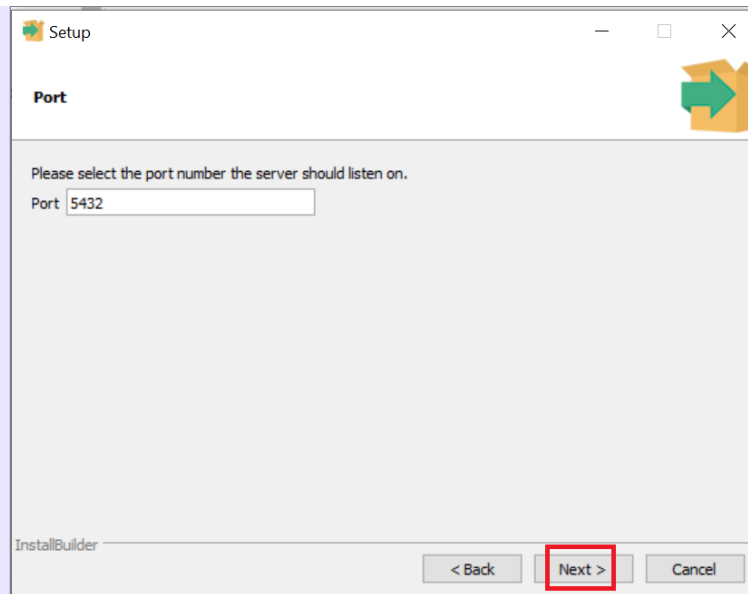

- Vali andmete asukoht
- Installer küsib, kuhu PostgreSQL andmefailid salvestada.
 - Vaikimisi pakutud asukoht sobib.
- → Next

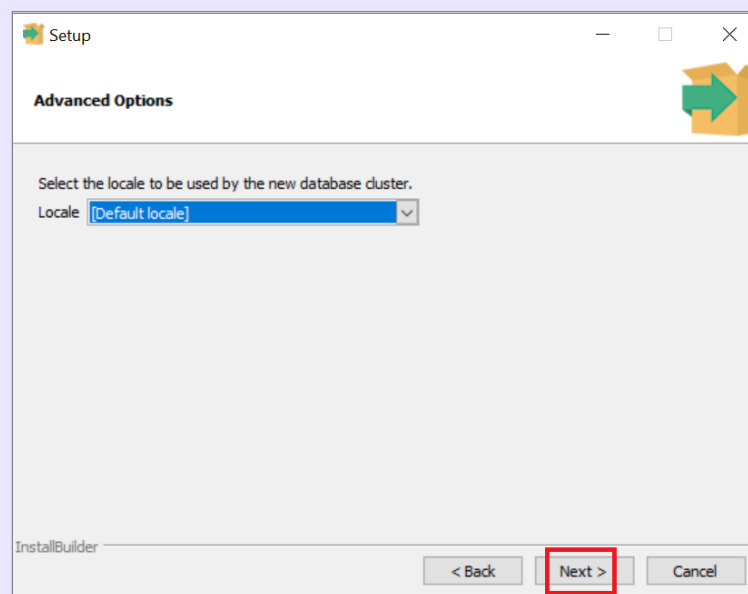

- Määra PostgreSQL parool
- Installer palub määrata PostgreSQL administraatorkasutaja postgres parooli.
Sisesta parooliks: student123
- **NB! See samm on väga oluline.** Kursuse projekt on seadistatud kasutama PostgreSQL ühenduseks seda parooli.

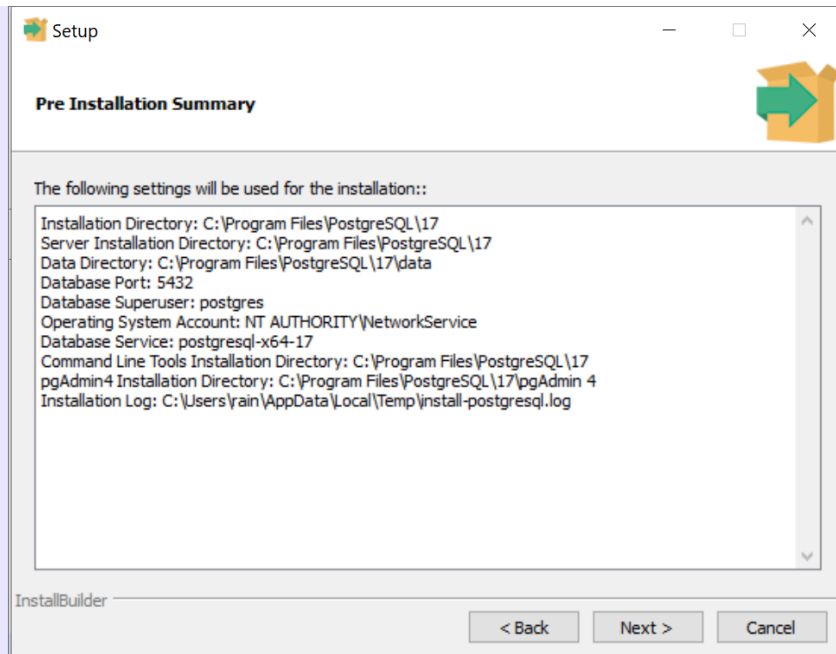

- Vali PostgreSQL port
- PostgreSQL vaikimisi port on:
 - 5432

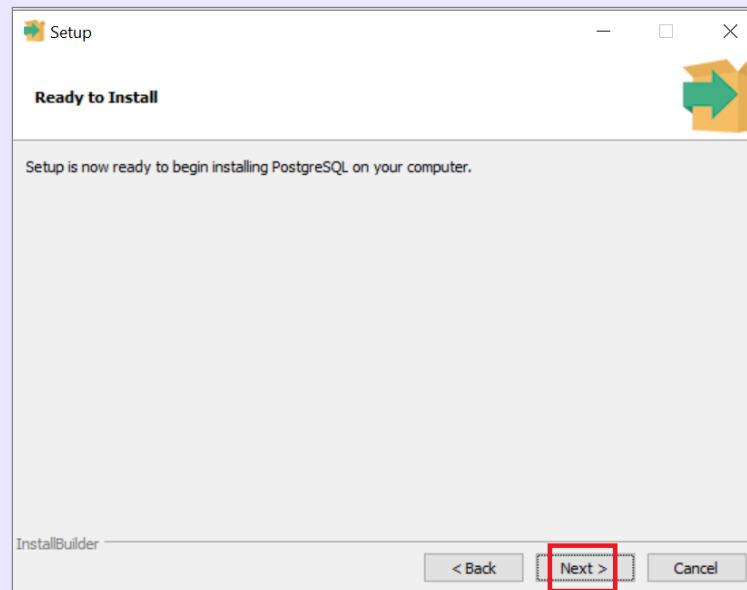

- Vali Locale
- Installer küsib PostgreSQL jaoks locale seadistust.
- Vaikimisi pakutud väärtus sobib.
- → Next

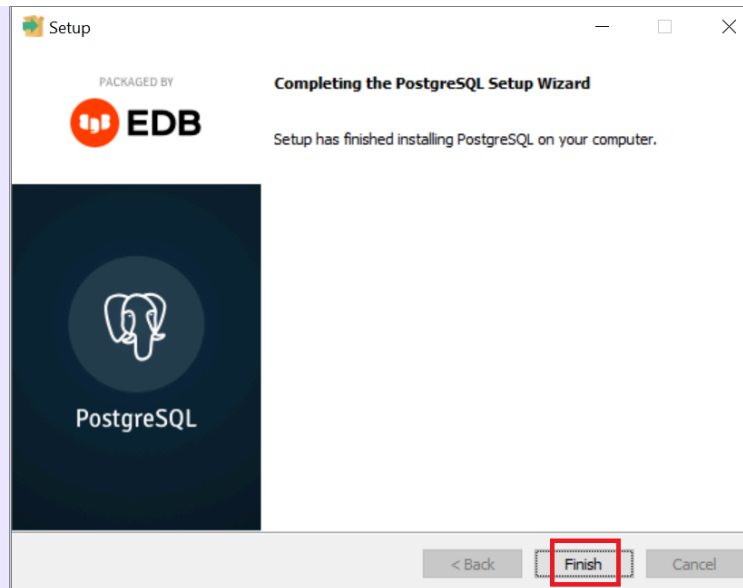

- Alusta paigaldamist
- Järgmistes sammudes kuvatakse paigalduse kokkuvõte.
- → Next

- → Next

- → Finish

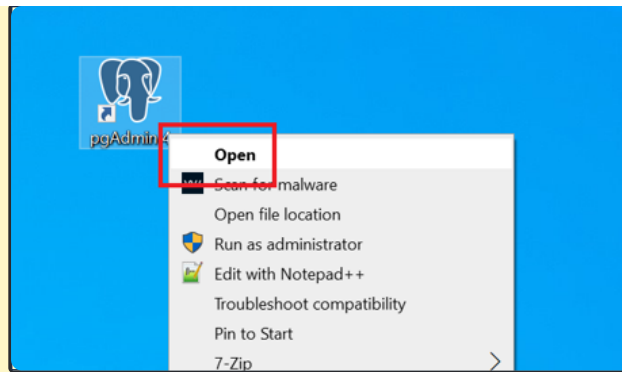

PostgreSQL käivitumine

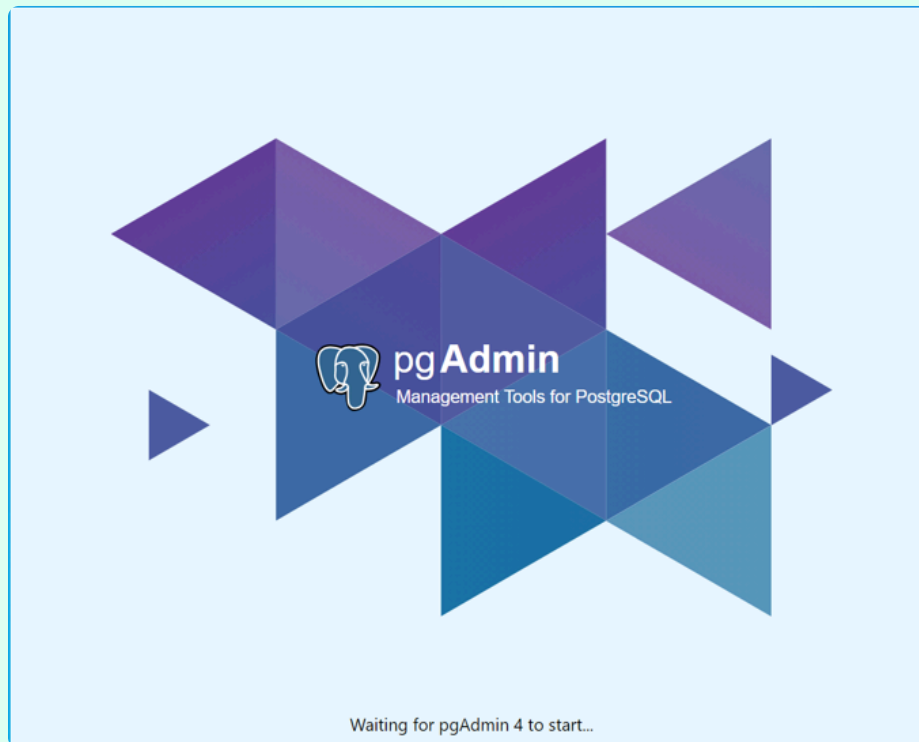

- PostgreSQL server käivitub pärast paigaldamist Windowsis tavaliselt automaatselt.
- Samuti käivitub see edaspidi automaatselt koos arvutiga.
- Seetõttu ei ole PostgreSQL serverit tavaliselt vaja käsitsi käivitada.

Kontrolli PostgreSQL-i pgAdminiga

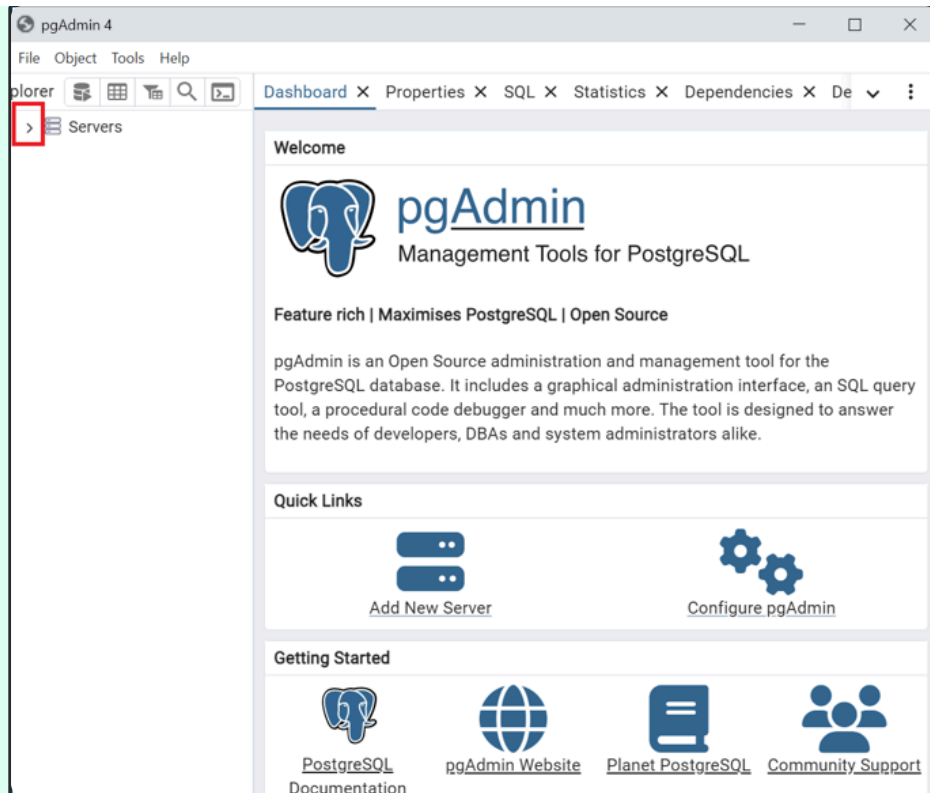

- PostgreSQL paigaldusega tuleb tavaliselt kaasa ka **pgAdmin 4**.
- pgAdmin on graafiline tööriist, mille abil saab PostgreSQL andmebaase vaadata ja hallata.
- Kursuse jooksul ei ole pgAdmini kasutamine vajalik, sest andmebaasi vaatamiseks kasutame peamiselt **IntelliJ Database** tööriista.
- Siiski peab pgAdmin vähemalt **ühe kora avama**, et lisada `vali_it` admebaas

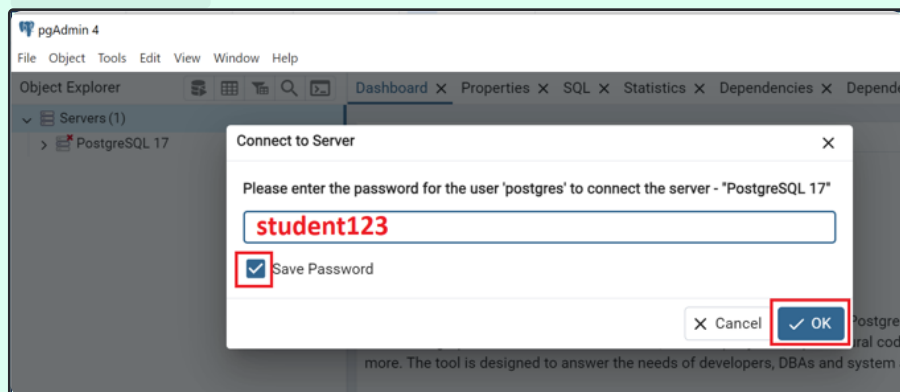

- ✓ • Ole kannatlik ja oota, kuni aken avaneb.

- Ava server
- pgAdmini vasakul küljel näed valikut:
 - Servers
- Vajuta selle kõrval olevale noolele

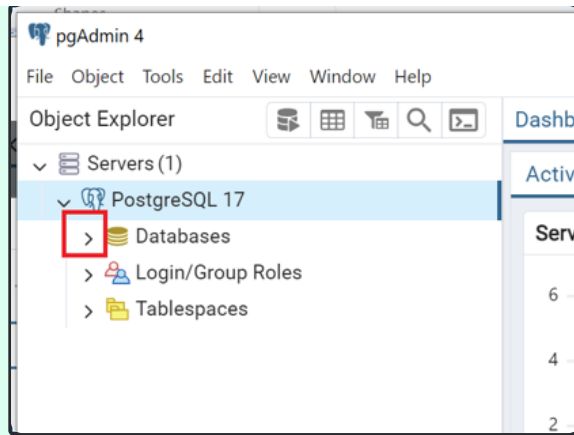

- Sisesta PostgreSQL parool
- Kui pgAdmin küsib parooli, sisesta:
 - student123

- Ava andmebaaside nimekiri

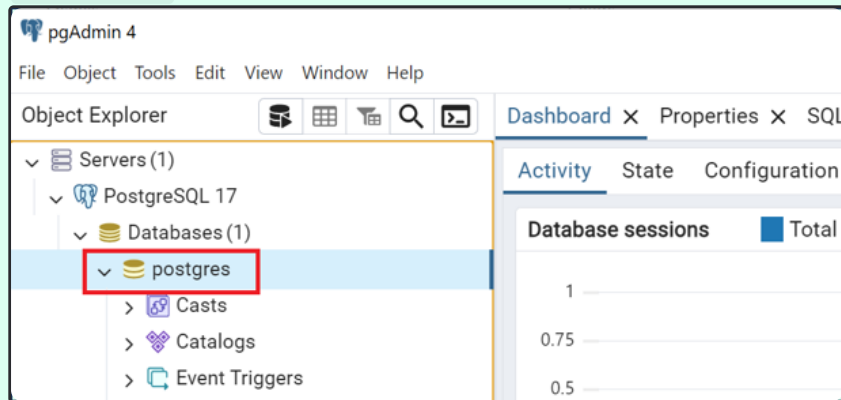

Serveri all ava:

Databases

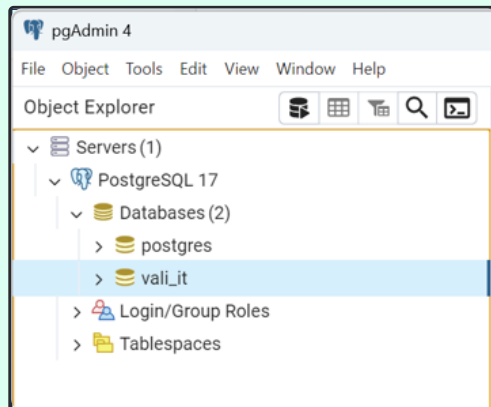

- Seal võid aga ei pruugi näha andmebaasi nimega:

`postgres`

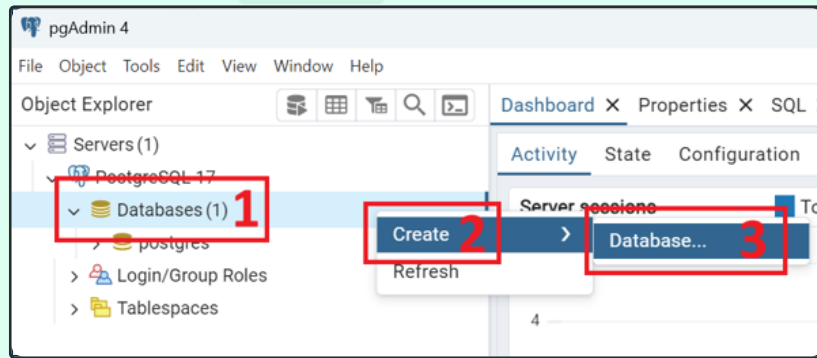

- Siia kõrvale on vaja andmebaasi nimega `vali_it`

- Selleks lisa parema klõpsuga
- → Create

- → Database

- uus andmebaas vali_it

- Database

- vali_it

- → Save
